FIRE SAFETY ANALYSIS WORKSHEET
(To be completed by the local fire official)

I, ___________________________________________ ______________________________ being the local authority having jurisdiction
(Print Name)                                                                                                          (Title)
have completed an in-depth Fire Safety Analysis of the proposed L.P. Gas Facility, which will be located at ________________________________
____________________________________________________ in the County of ______________________________________. During this Fire Safety
Analysis I have determined the following:

I.
(1) This proposed installation is located approx. ______________ feet from the nearest important building(s) and ______________ feet from the property line.

(2) The response time of the nearest fire department to this facility is approx. __________ minutes. (Should be within 10 minutes.)

(3) An adequate water supply is provided at this location, which would be able to provide at least 250 – 500 gpm per each tank, which might
be exposed to a single fire. ( )Yes ( )No

II.
( ) I have determined that regardless of fire department response time and water supply capabilities this proposed facility may be built due to
its remote location, which would pose little or no life safety hazards. In the event of fire at this facility the fire department and public
safety personnel will limit their emergency forces to control of traffic and onlookers.

( ) I have determined that some hazard does exist to persons and/or other property at this proposed site. However, due to water supply and
fire department response time and capabilities this facility may be built.

( ) An unacceptable hazard exists at this proposed location due to one or all of the following reasons: heavily populated or congested area,
container location(s), fire department response time, inadequate water supply, fire department capabilities, other. However this facility
may be built if the L.P. Gas facility provides the following:

______________________________________________________________________________________________________________________
______________________________________________________________________________________________________________________
______________________________________________________________________________________________________________________
______________________________________________________________________________________________________________________
______________________________________________________________________________________________________________________
______________________________________________________________________________________________________________________
______________________________________________________________________________________________________________________
______________________________________________________________________________________________________________________

( ) An unacceptable hazard exists at this proposed location and the L.P. Gas facility may not be built at this location.
